WORK SAFELY AND SECURELY WHEN SERVICING VEHICLES

A fully adjustable, lightweight fall prevention working platform designed to prevent workers from falling into inspection pits when servicing vehicles.

INNOVATIVE PATENTED SAFETY SOLUTIONS

INSPECTION PIT COVER

KEY FEATURES & BENEFITS

- Lightweight system formulated with aluminum
- Highly adaptable – adjusts in both width and length; a perfect fit every time
- Robust pit cover designed to hold operatives' weight

PitProtect has been designed to keep operatives safe by preventing falls into inspection pits and voids when servicing vehicles. The cover is constructed from aluminum and has a concertina design, making it easy to open and close.

The system is lightweight but strong enough to support operatives' weight. The cover can be used as a working platform and a fall prevention system. The system is ready to go with no training needed and has been designed to be fully adjustable in both length and width. Each bar can be set at a different width, so it is suitable for covering an uneven-width pit and ensures a perfect fit for any job.

The PitProtect system is a reliable choice, as it conforms to the BS.8630.2019 safety standards. This ensures that the system meets the highest safety requirements, providing peace of mind to operatives and managers alike. Additionally, the system comes in three sizes, the PitProtect 1100, 1300, and 1500, catering to a variety of needs.
